# Emerging Voice Interfaces for Content Consumption

# Diverse Content Delivered Through Voice Interfaces

# Visual Interface

# Voice Interface

# What we may expect

- Users may spend longer time considering each recommendation.
- Users may explore recommendation lists less.
- Users may less likely choose items ranked lower in recommendation lists.

How much worse it is? Does it matter?

# This Work

A between-subject randomized control study  
comparing Voice and Visual interfaces

Efficiency

Exploration

Choice

# Study Design

Independent variable (Factor): Interface

Same list of podcast recommendations

# Study Design

Independent variable (Factor): Interface

## Step 1:

- Browse a long list of episodes (1-N).
- Making a committed choice: typing in the index number & listen to the episode for at least 5 minutes

Same list of podcast recommendations

# Study Design

Independent variable (Factor): Interface

# Study Design

Independent variable (Factor): Interface

# Efficiency

The number of recommendations considered per minute

Visual

54

Voice

6

# Exploration

The maximum index number of the recommendations considered

Visual

47.8\*

Voice

15.3

# Choice: Lower-ranked Items

The index number of the chosen episode

Visual

47.8

Voice

7.3

# Choice: Lower-ranked Items

# Main Implications

$1/9$  efficiency

$1/3$  exploration

$1/6$  chosen episode rank

# Main Implications

$1/9$  efficiency

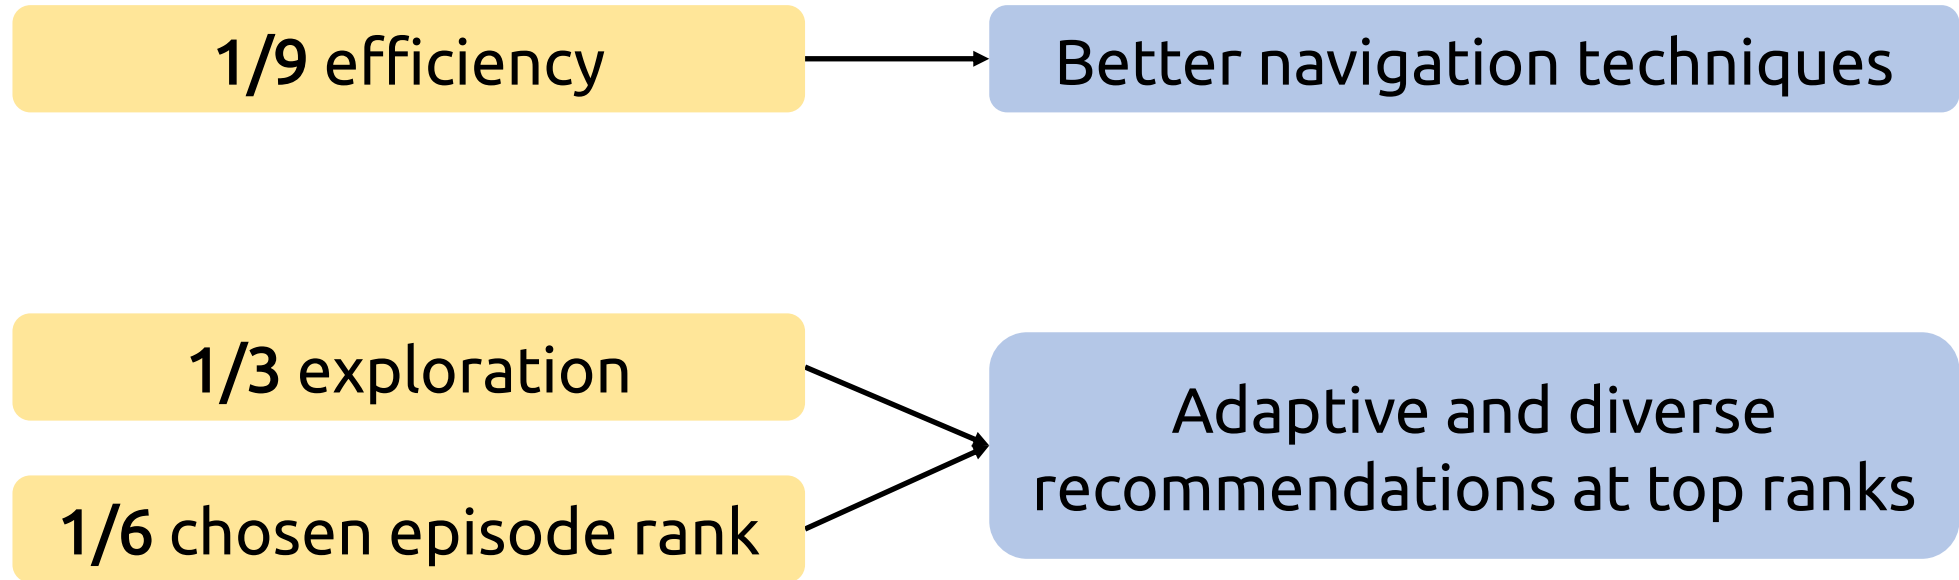

Better navigation techniques

$1/3$  exploration

$1/6$  chosen episode rank

# Main Implications

Please refer to our paper for more experimental details and results!
